

CS 188: Artificial Intelligence

Introduction

Spring 2023

University of California, Berkeley

[These slides were created by Dan Klein and Pieter Abbeel for CS188 Intro to AI at UC Berkeley (ai.berkeley.edu).]

First Half of Today: Intros and Logistics

- Staff introductions: Peyrin, Igor and course staff
- Course logistics
 - Lectures, discussions, office hours, and exams
 - Resources and communication platforms
 - Collaboration and academic honesty
 - DSP and extenuating circumstances
 - Stress management and mental health

Staff Introductions: Peyrin (he/him)

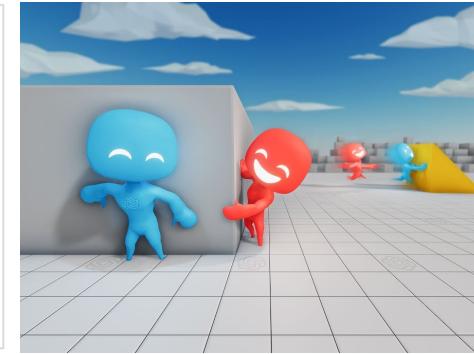

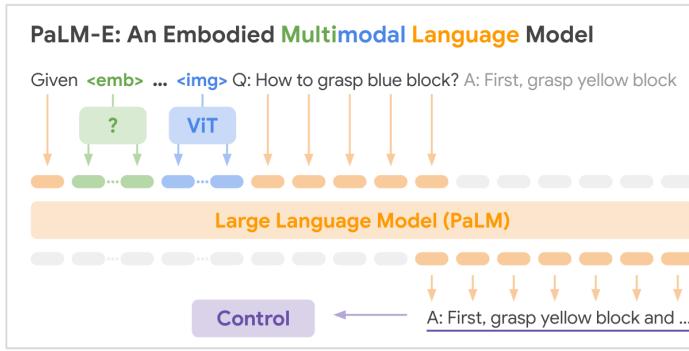

- Did my undergrad at Berkeley (2017-2021)
 - TA for 10 semesters (8x CS 161, 3x CS 61C, 1x CS 188)
 - Also been on staff for CS 61A, EE 16A, EE 16B
- Did a 5th year MS at Berkeley (2021-2022)
 - Research focus: computer science education
 - Advisors: Nicholas Weaver and Dan Garcia
- First-year lecturer in EECS
 - I'm paid exclusively to care about students and staff
 - First time teaching a non-summer class as instructor, so your feedback/advice/complaints are appreciated!
- Please call me “Peyrin”!
 - No “professor”, “Mr.”, “sir”, “doctor”, etc. I’m not paid enough for that.

Actual real picture of me.

Staff Introductions: Igor (he/him)

- Currently: Lecturer and Researcher at Google DeepMind
- Previously: OpenAI, UC Berkeley, Pixar
- Research focus: robotics, large models, multi-agent AI

- Favorite animal: wombat
- Loves: feedback

might have a few more people join so here's a placeholder

Enrollment

- Course staff does not control enrollment; we have to follow department policy
 - Only CS majors will be able to enroll this spring
 - More details on the course website

Course Structure: Lectures

- You are here!
- Tuesday/Thursday, 5:00–6:30 PM PT
- Attendance is not taken
 - But there may be a bit of extra credit for attending
- You can attend:
 - In-person in Pimentel 1
 - Remotely over Zoom
 - Asynchronously by watching recordings (posted next day on website)

Course Structure: Discussions

- We offer three types of discussions
 - Regular discussions
 - Exam prep discussions
 - Extended-time discussions
 - We'll try to make recordings, but no promises
- Discussion schedule available on website
 - Discussions start next week (August 28)
- You can attend any discussion section you want (no need to enroll in a section)
 - A bit of extra credit available for attendance

Course Structure: Office Hours

- Join in-person or remotely to talk to staff about content, ask questions on assignments, or raise any concerns you have
- Schedule and queue available on website
 - Office hours start next week (August 28)

Course Structure: Exams

- Save the dates!
 - Midterm: Monday, October 16, 2023, 7–9pm PT
 - Final exam: Thursday, December 14, 11:30am–2:30pm PT
- If you can't make it:
 - We'll offer remote exams at the listed time
 - We'll offer an in-person-only alternate exam right after the listed time
- More logistics closer to the exam

Resources

- Course website: <https://inst.eecs.berkeley.edu/~cs188/fa23/>
 - All resources (slides, notes, recordings, assignments, etc.) posted here
- Ed: Discussion forum
- Staff email for private concerns: cs188@berkeley.edu
 - Making a private post on Ed is easier/faster
- Gradescope: Submit assignments here

Grading Structure

- Projects (25%)
 - Python programming assignments, autograded
 - You can optionally work with a partner
 - Reduced credit for submitting late, unless you have an extension
- Homework (20%)
 - Electronic homework: Autograded on Gradescope
 - Written homework: One question per week, graded by TAs on correctness
 - Submit individually (but feel free to discuss with others)
 - No late submissions, unless you have an extension
- Midterm (20%), Final Exam (35%)

Extensions and Accommodations

- We'll drop your lowest homework score
- You have 5 slip days to use across the projects
 - See course policies page for details on how they work
- If you ever need an extension, please request one!
 - We're here to support you, and we understand that life happens.
 - Extension form will be posted on the website

DSP

- Disabled Students' Program (DSP)
 - There's a variety of accommodations UC Berkeley can help us set up for you in this class
 - <https://dsp.berkeley.edu/>
- Are you facing barriers in school due to a disability?
 - Apply to DSP!
 - We maintain proper access controls on this information: Only instructors, course managers, head TAs, and logistics TAs can access any DSP-related info
- Our goal is to teach you the material in our course. The more accessible we can make it, the better.

Collaboration and Academic Dishonesty

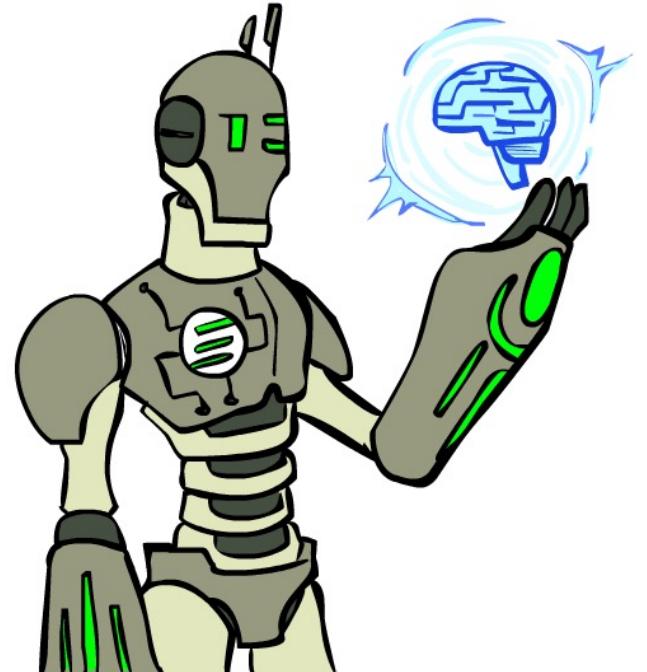

- We're here to help! There are plenty of staff and resources available for you
 - You can always talk to a staff member if you're feeling stressed or tempted to cheat
 - Collaboration on homework is okay, but please cite collaborators
 - Do not post solutions online or share with others!
- Academic dishonesty policies
 - Reported to Center of Student Conduct
 - Negative points on assignments, and/or F in the class

Stress Management and Mental Health

- **Your health is more important than this course**
- If you feel overwhelmed, there are options
 - Academically: Ask on Ed, talk to staff in office hours, set up a meeting with staff to make a plan for your success this semester
 - Non-academic:
 - Counselling and Psychological Services (CAPS) has multiple free, confidential services
 - Casual consultations: <https://uhs.berkeley.edu/counseling/lets-talk>
 - Crisis management: <https://uhs.berkeley.edu/counseling/urgent>
 - Check out UHS's resources: <https://uhs.berkeley.edu/health-topics/mental-health>

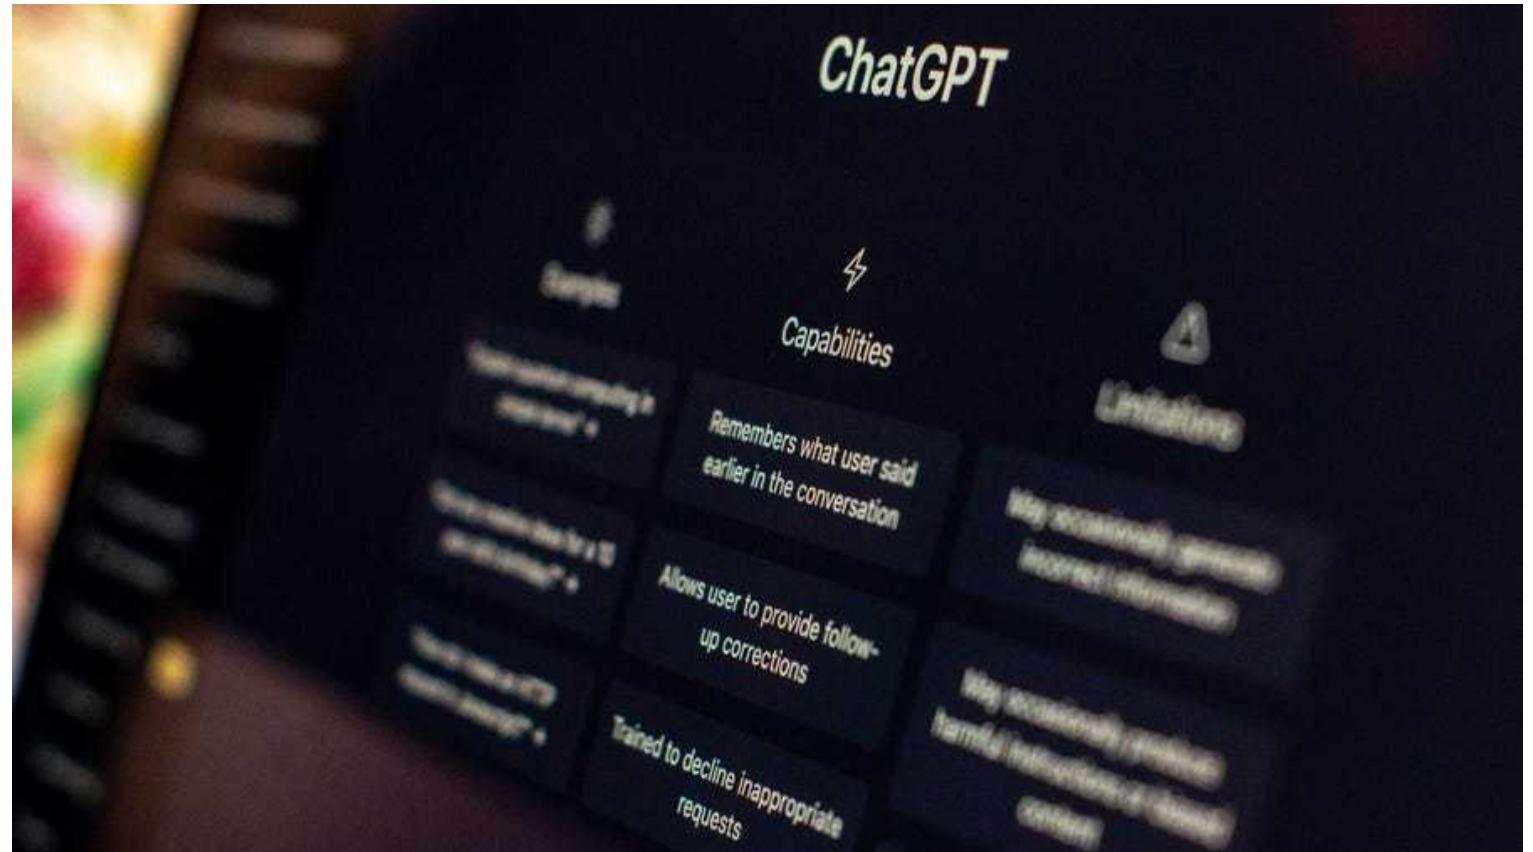

Second Half of Today: What is AI?

- What is artificial intelligence?
- What can AI do?
- What is this course?

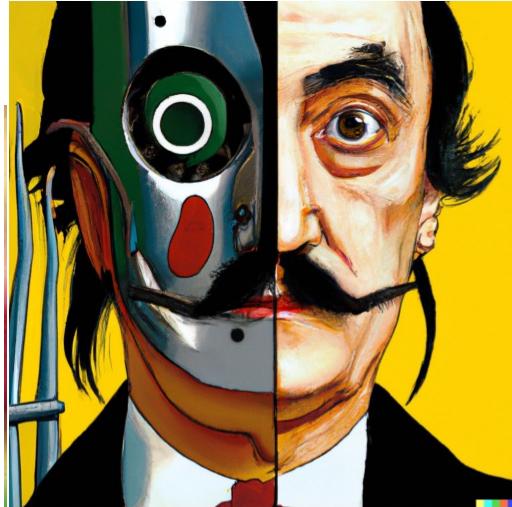

AI is having real-world impact

- Public imagination

DeepMind Has Trained an AI to Control Nuclear Fusion

The Google-backed firm taught a reinforcement learning algorithm to control the fiery plasma inside a tokamak nuclear fusion reactor.

A photograph showing the interior of a tokamak reactor. The central plasma is a bright, glowing purple and blue, contained within a circular magnetic field. The reactor walls are dark and metallic, with some equipment visible around the perimeter. The image is taken from a low angle, looking up into the reactor vessel.

Ok, but what does AI *do*???

Science fiction AI?

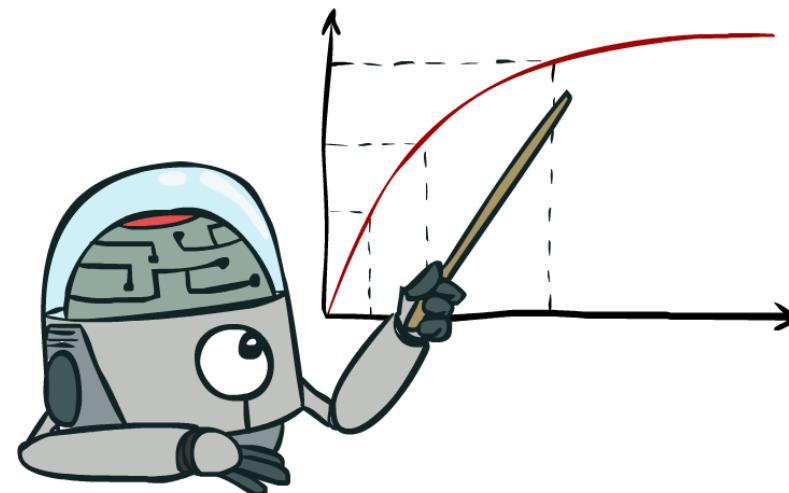

What is AI?

The science of making machines that:

Rational Decisions

- We'll use the term **rational** in a very specific, technical way:
 - Rational: *maximally achieving pre-defined goals*
 - Goals are expressed in terms of the **utility** of outcomes
 - World is uncertain, so we'll use **expected utility**
 - Being rational means acting to **maximize your expected utility**

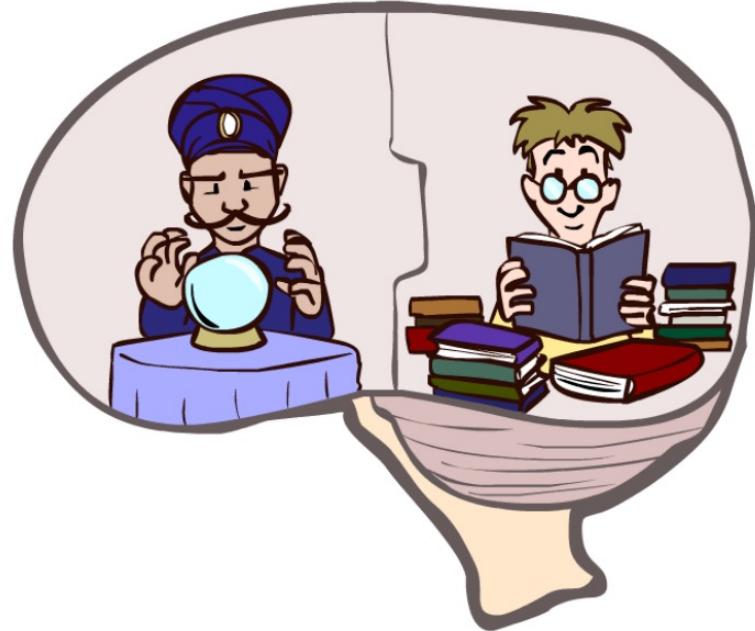

Rational Decisions

- We'll use the term **rational** in a very specific, technical way:
 - Rational: *maximally achieving pre-defined goals*
 - Goals are expressed in terms of the **utility** of outcomes
 - World is uncertain, so we'll use **expected utility**
 - Being rational means acting to **maximize your expected utility**

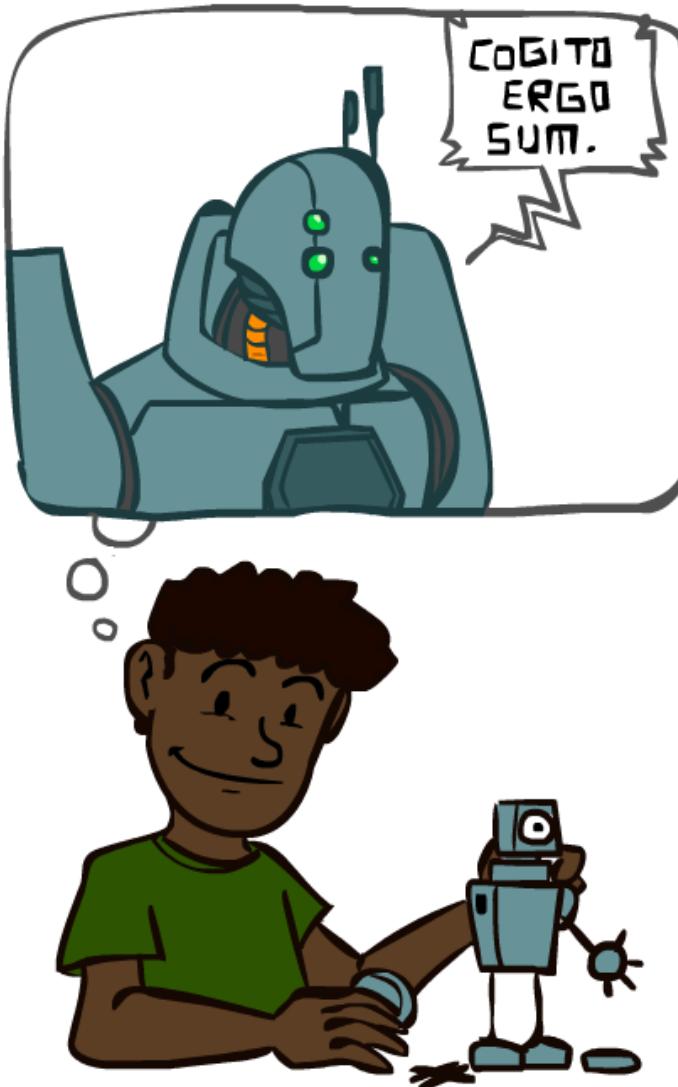

A better title for this course would be:
Computational Rationality

What About the Brain?

- Brains (human minds) are very good at making rational decisions, but not perfect
- Brains aren't as modular as software, so hard to reverse engineer!
- AI may be better than brains at some tasks
- *"Brains are to intelligence as wings are to flight"*
- We can't yet build AI on the scale of the brain
 - ~100T synapses in the human brain vs 500B weights in artificial neural networks
- Still, the brain can be a great inspiration for AI!

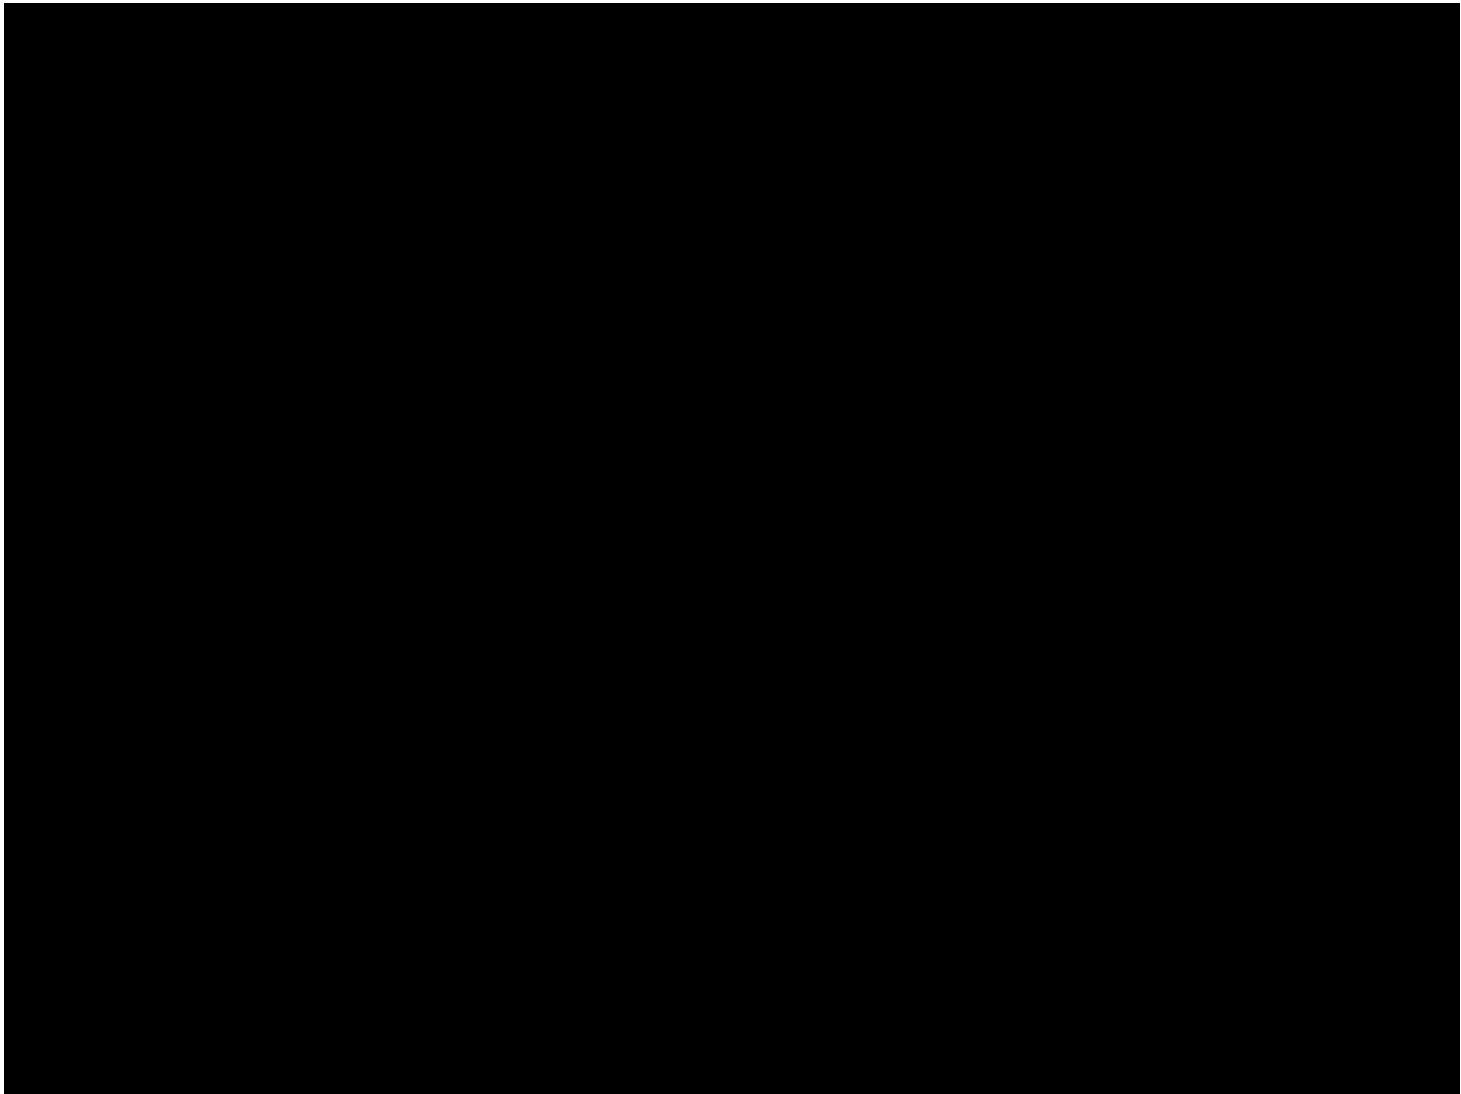

A (Short) History of AI

A (Short) History of AI

- 1940-1950: Early days: neural and computer science meet
 - 1943: McCulloch & Pitts: Boolean circuit model of brain
 - 1950: Turing's "Computing Machinery and Intelligence"
- 1950—70: Excitement! Logic-driven
 - 1950s: Early AI programs, including Samuel's checkers program, Newell & Simon's Logic Theorist, Gelernter's Geometry Engine
 - 1956: Dartmouth meeting: "Artificial Intelligence" adopted
 - 1965: Robinson's complete algorithm for logical reasoning

A (Short) History of AI

- 1970—90: Knowledge-based approaches
 - 1969—79: Early development of knowledge-based systems
 - 1980—88: Expert systems industry booms
 - 1988—93: Expert systems industry busts: “AI Winter”
- 1990—: Statistical approaches
 - Resurgence of probability, focus on uncertainty
 - General increase in technical depth
 - Agents and learning systems... “AI Spring”?
 - 1996: Kasparov defeats Deep Blue at chess
 - 1997: Deep Blue defeats Kasparov at chess

“I could feel --- I could smell ---
a new kind of intelligence
across the table.” ~Kasparov

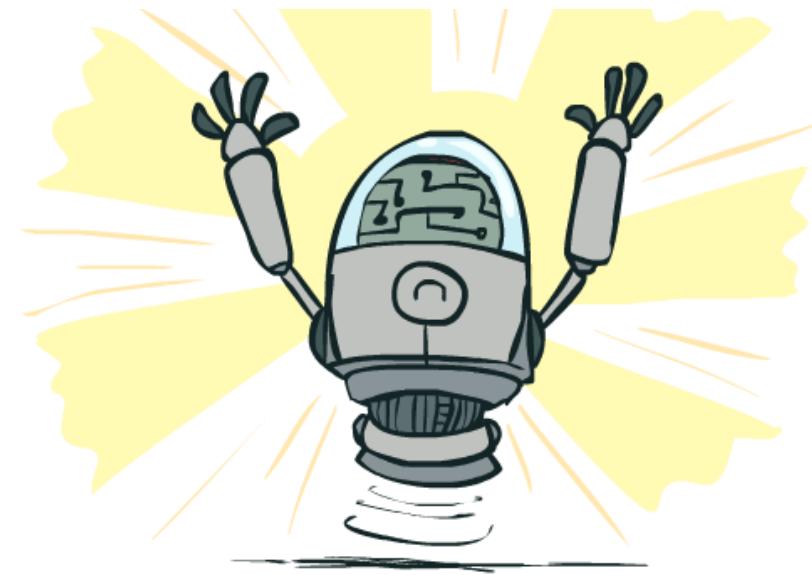

A (Short) History of AI

- 2000—: Where are we now?
 - Big data, big compute, neural networks
 - Some re-unification of sub-fields
 - AI used in many industries
 - Chess engines running on ordinary laptops can defeat the world's best chess players
 - What can AI do now?

What Can AI Do?

Quiz: Which of the following can be done at present?

- ✓ Win against any human at chess?
- ✓ Win against the best humans at Go?
- Play a decent game of tennis?
- Unload any dishwasher in any home?
- Drive safely along the highway?
- Drive safely along streets of San Francisco?
- Buy a week's worth of groceries on the web?
- Buy a week's worth of groceries at Berkeley Bowl?
- Discover and prove a new mathematical theorem?
- Perform a surgical operation?
- Translate spoken Chinese into spoken English in real time?
- Win an art competition?
- Write an intentionally funny story?
- Construct a building?

What Can AI Do?

A screenshot of a conversational AI interface. On the left, there is a small circular profile picture of a man with a beard. Next to it, the text "write me a very, very short funny story" is displayed. On the right, there is a green icon of a stylized brain or neural network. Below these, a generated story is shown in white text on a dark background:

In a world where alarm clocks had minds of their own, Tom's clock decided it was tired of the daily grind. One morning, instead of blaring its usual wake-up call, it played "Eye of the Tiger" at full volume while flashing disco lights. Startled and thoroughly entertained, Tom couldn't help but dance his way out of bed, realizing he had just been outwitted by an alarm clock with a flair for the dramatic. From that day on, waking up became a daily dance-off between man and machine, with Tom perfecting his morning moves and the clock unveiling new surprises, turning the bedroom into a groovy battleground at dawn.

This Course: Designing Rational Agents

- An **agent** is an entity that perceives and acts.
- A **rational agent** selects actions that maximize its (expected) **utility**.
- Characteristics of the **percepts**, **environment**, and **action space** dictate techniques for selecting rational actions
- This course is about:
 - General AI techniques for a variety of problem types
 - Learning to recognize when and how a new problem can be solved with an existing technique

Pac-Man as an Agent

Should I take CS 188?

- Yes, if you want to know how to design rational agents!
 - CS 188 gives you extra mathematical maturity
 - CS 188 gives you a survey of other non-CS fields that interact with AI (e.g. robotics, cognitive science, economics)
- Disclaimer: If you're interested in making yourself more competitive for AI jobs, CS 189 and CS 182 are better fits.
 - The last few CS 188 lectures (neural networks) are used by many modern state-of-the-art systems. CS 189 and CS 182 cover these in more depth

By the end of this course you'll:

- Build and understand math of rational, learning agents
- Select and apply the right AI methods for wide range of problems
- Recognize how these methods are used in modern AI systems
- Be prepared to make decisions on how AI is used in society

Next Week: Search
